NNT LOG TRACKER ENTERPRISE™

KEY BENEFITS OF NNT LOG TRACKER ENTERPRISE™

- Compliance Made Easy - Exceed requirements of all major Compliance Policies, including PCI DSS and GCSx Code of Connection
- Enterprise Solution - All server platforms, firewalls, intrusion protection systems and other network devices supported
- Easy to Implement and Use - Logs are automatically correlated and analyzed using pre-built Compliance templates, alerting you to significant events
- Includes Windows, Unix, iSeries and z/OS agents - Directly gather log messages from all common Operating Systems, Databases and Applications, even from bespoke applications

NNT Log Tracker Enterprise™ provides a comprehensive and secure SIEM solution for any compliance mandate.

Event Log analysis is a key weapon in the fight against any cyber attack. Identifying the method and source of any attack allows preventative measures to be continually improved. This is why all security policies place log retention at their core.

PCI DSS compliance requires logs to be gathered and reviewed daily, and retained for at least one year. Similarly for GCSx Code of Connection Compliance or CoCo - Audit logs recording user activities, exceptions and information security events are to be retained for at least 6 months.

Log Tracker Enterprise™ from NNT will gather and analyze event logs for policy compliance from all

- Network Devices
- Windows, Unix and Linux servers
- Firewall or IPS and IDS devices
- Email and Web Servers
- Database and Application servers
- IBM iSeries and z/OS Mainframes

But as an enterprise SIEM solution, NNT Log Tracker Enterprise™ doesn't stop there. All event logs are analyzed and correlated automatically, applying a comprehensive series of rules pertinent to any security or governance policy.

Security Incident Evaluation Automated

Any breach of compliance will be alerted immediately allowing preemptive action to be taken before a problem arises. Pre-Defined rules templates allow you to be in control of compliance straight out of the box.

- All Security and Governance Policies supported via pre-packed Compliance Rule Templates
- Real Time Security Warnings i.e. violation of file integrity monitoring rules
- PCI DSS, SOX, ISO27K and GCSx Code of Connection standards supported 'out of the box'
- Web-based Dashboard and integration with Servicedesk as standard
- Powerful, keyword-based Event Log mining for any combination of devices/apps
- Complete solution for Security, Incident and Event Management requirements

Log Tracker Enterprise™ allows you to focus on true exceptions and important events by masking off the sometimes overwhelming flood of logs. Use the pre-built Compliance Templates then add your own keyword and logic-based correlation rules, allowing you to manage what really matters to your organization from a security and compliance standpoint.

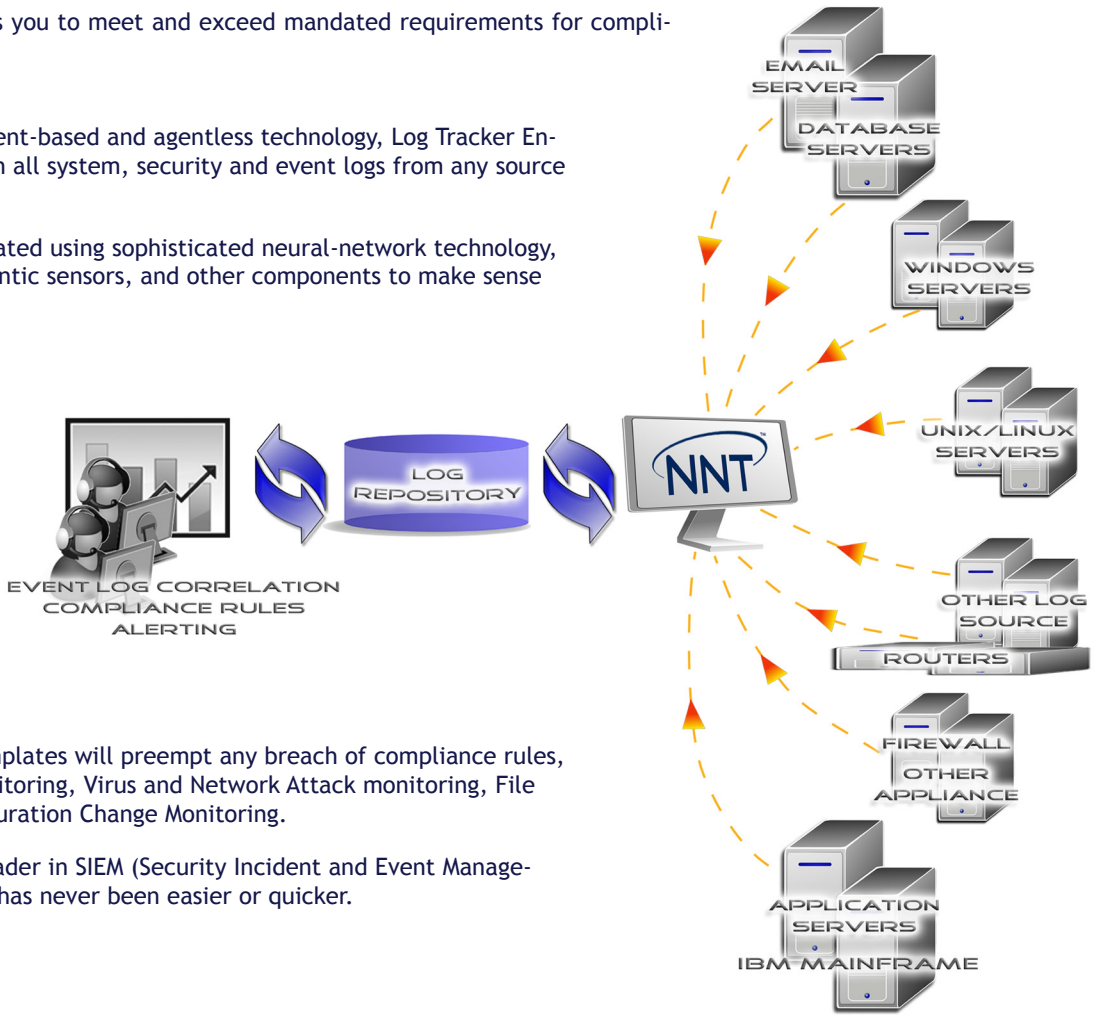
NNT LOG TRACKER ENTERPRISE™

LOG TRACKER ENTERPRISE™ allows you to meet and exceed mandated requirements for compliance with any regulatory standard.

- Employing a combination of agent-based and agentless technology, Log Tracker Enterprise™ will gather and retain all system, security and event logs from any source within your network
- Events are analyzed and correlated using sophisticated neural-network technology, auto-learning algorithms, semantic sensors, and other components to make sense from raw logfile messages.
- All organizations needing to store logs in accordance with a PCI DSS or GCSx Code of Connection requirement will benefit from Log Tracker Enterprise™. Long term storage of even large scale log events can easily be searched and filtered for the forensic analysis required by any auditing body.



- Out of the Box Compliance Templates will preempt any breach of compliance rules, for instance, User Account Monitoring, Virus and Network Attack monitoring, File Integrity Monitoring and Configuration Change Monitoring.
- Log Tracker Enterprise™ is a leader in SIEM (Security Incident and Event Management) technology. Compliance has never been easier or quicker.

KEY BENEFITS

- log events are gathered directly from all servers and network devices, including IBM AS/400 and even z/OS Mainframe
- events are stored centrally in a secure log repository
- powerful analysis and correlation applied automatically in real-time to ensure Compliance and pre-empt security problems
- 'out of the box' Compliance Rule templates give you control of compliance within minutes of installation
- any system or event log message can be correlated and mined using the powerful correlation rules engine
- full auditing and reporting of incident and activity audit trails will delight your auditor

About NNT

NNT is a global provider of data security and compliance solutions, with a particular emphasis on PCI DSS. We are firmly focused on helping organizations protect their sensitive data against security threats and network breaches in the most efficient and cost effective manner. Our easy to use security monitoring and change detection software combines Device Hardening, SIEM, CCM and FIM in one integrated solution, making it straightforward and affordable for organizations of any size to ensure their IT systems remain healthy, secure and compliant at all times - NNT will safeguard your systems and data freeing you up to focus on delivering your corporate goals.
